

ScoutGrid

From vulnerability awareness to confident, coordinated action.

ScoutGrid gives organizations a decision-ready view of exposure and the intelligence to reduce it. Security leaders gain clarity, teams receive practical guidance, low-value work falls away, and major remediation efforts stay visible and accountable.

THE CUSTOMER PROMISE	Know what matters. Understand the right fix. Keep teams focused. Accelerate action. Prove progress.
----------------------	---

01 Intelligence Current vulnerability awareness and practical fix guidance.	02 Focus Automatic suppression keeps active queues credible.	03 Action Agentic remediation and campaigns expand execution capacity.

FIVE VALUE CAPABILITIES

Intelligence and action that strengthen the entire security program

ScoutGrid turns exposure management into a more focused and accountable organizational discipline. Each capability delivers a distinct customer outcome.

Vulnerability intelligence
Keep leaders and practitioners current on newly disclosed issues, active exploitation, changing urgency, software lifecycle risk, and the exposure that deserves attention.

Fix intelligence
Give teams practical remediation guidance, including target versions, available mitigations, workarounds, and the evidence needed to choose the right response.

Automatic suppression
Remove known-safe, duplicate, resolved, and non-actionable work from active queues while retaining the decision record needed for governance.

Agentic remediation
Use AI-assisted agents to prepare remediation plans, draft actions, identify validation steps, and accelerate human-approved execution.

Remediation campaigns
Turn major risk themes into coordinated efforts with accountable owners, milestones, exceptions, watchlists, and visible progress.

Executive visibility
Show exposure, overdue action, campaign health, ownership gaps, and improvement in a form leaders can use.

THE VALUE OF THE COMBINED EXPERIENCE

CUSTOMER OUTCOME	ORGANIZATIONAL BENEFIT
Better awareness	Stay current on the vulnerabilities that can change the organization's risk posture
Faster resolution	Give teams clearer fix options and reduce repeated research
Less noise	Protect scarce attention and keep active queues credible
More execution capacity	Reduce preparation work while people retain control of decisions
Stronger coordination	Align teams around material risks and make progress visible

VALUE ACROSS THE ORGANIZATION

Every stakeholder receives a clearer answer and a stronger next move

ScoutGrid gives each stakeholder the value they need while keeping the organization aligned around shared priorities, accountable action, and measurable progress.

STAKEHOLDER	VALUE RECEIVED	ORGANIZATIONAL EFFECT
CISO and security leadership	Vulnerability awareness, campaign visibility, and a defensible view of material exposure	Clearer investment, escalation, and risk-acceptance decisions
Vulnerability management	Focused queues, automatic suppression, fix guidance, and coordinated campaigns	Less triage friction and faster progress on critical work
Application security	Application-level risk with practical fix intelligence	Better decisions with development and product owners
Infrastructure and cloud teams	Priorities, recommended actions, and validation guidance for the systems they operate	Less ambiguity and faster remediation
Application and service owners	A business-relevant explanation of risk, expected action, and campaign status	Faster acceptance and fewer stalled handoffs
Risk and compliance	Visible suppressions, exceptions, deadlines, campaign milestones, and evidence of progress	Stronger governance and more efficient reviews
Executive stakeholders	Concise reporting on exposure, accountability, campaigns, and improvement	Greater confidence that risk is understood and managed

SHARED VALUE

Vulnerability intelligence informs the decision; fix intelligence improves the response; suppression protects focus; agentic remediation increases capacity; campaigns sustain accountability.

WHERE CUSTOMERS SEE VALUE FASTEST

High-impact outcomes for common security challenges

Zero-day readiness
Use current vulnerability intelligence to understand urgency, focus the organization, and give leaders a clear response posture.

Faster fixes
Reduce research time with fix intelligence that gives teams practical resolution choices and validation guidance.

Noise reduction at scale
Keep queues relevant through automatic suppression of work that no longer deserves active attention.

Agentic remediation
Increase team capacity with AI-assisted preparation and execution support under human oversight.

Campaign-based action
Coordinate cross-team remediation around a major vulnerability, risky technology, overdue portfolio, or executive priority.

Executive risk reporting
Show concentration of risk, campaign progress, overdue action, and improvement without rebuilding the story for every review.

COVERAGE CUSTOMERS CAN USE ACROSS THE MODERN ENVIRONMENT

AREA	CUSTOMER VALUE
Infrastructure	A consistent view of priority risk, fix options, and accountable action across technology estates
Cloud	Clear visibility into the workloads and services that require the most attention
BOM	Ongoing vulnerability and remediation value from software, cloud, AI, cryptography, and vendor BOM records
AI	A path to visibility and risk oversight for models, agents, MCP servers, and related AI assets

Availability note: AI Grid is in active development. Confirm early-access availability and scope during evaluation.

WHY SCOUTGRID

The outcome is a more intelligent, focused, and accountable security program

ScoutGrid complements the tools already in place by improving the quality of awareness, decisions, remediation, and cross-team execution. The shift is visible in everyday work and executive reporting.

BEFORE SCOUTGRID	WITH SCOUTGRID
Teams chase broad vulnerability volume	Vulnerability intelligence keeps attention on material and changing risk
Practitioners research fixes from scratch	Fix intelligence gives teams practical response options
Known-safe work remains in active queues	Automatic suppression protects focus and preserves governance
Experts spend time preparing routine actions	Agentic remediation expands capacity with human oversight
Major risks are managed through scattered tickets	Campaigns create coordinated ownership, milestones, and progress
Executives receive manually assembled reports	Leadership sees a concise, current view of exposure and action

WHAT A SUCCESSFUL EVALUATION SHOULD PROVE

BETTER AWARENESS Explain which vulnerabilities deserve attention and why.	FASTER FIXES Provide useful remediation options without repeated research.
LESS NOISE Produce a smaller, more credible active queue.	MORE CAPACITY Accelerate preparation and execution while retaining human control.
VISIBLE PROGRESS Make campaign ownership, milestones, exceptions, and outcomes clear.	STRONGER CONFIDENCE Give leaders a current view of exposure and action.

**START WITH A SCENARIO
YOUR TEAMS ALREADY
UNDERSTAND**

Choose one critical vulnerability, one difficult remediation, or one cross-team campaign. ScoutGrid can demonstrate the customer value around it.
